

WWII Submarine S-28 Discovered

“Top ten Iconic mysterious shipwrecks around the world”

Award winning explorer and underwater robotics expert Tim Taylor, president and CEO of Tiburon Subsea has discovered WWII Submarine USS S-28 (SS-131).

The S-28 is considered the most important lost US WWII vessel in the central Pacific according the former director of the United States National Ocean and Atmospheric Administration (NOAA). Outside Magazine included the USS S-28 in their feature article as one of the top ten iconic missing ships waiting to be discovered.

The USS S-28 sank on July 4th 1944 and was found in 2650 meters (8700 feet) of water off the cost of Oahu, Hawaii with her entombed crew of 49 US sailors.

The current mapping and filming of the wreck by the discovery team is yielding valuable information that can help determine and possibly solve the cause of the sinking. The data collected on this expedition is being shared with the US Navy Heritage Command. It is also important to share this news with the family members of the entombed sailors and we encourage direct family members to contact us at info@tiburonsubsea.com.

Tiburon Subsea specializes in advanced underwater technology supplying autonomous and imaging technology rental, training and support solutions.
